Google

Re: Solutions Engineer, Chrome Scaled Solutions, gUP Chrome and Web Ecosystem

Dear Hiring Team,

The web is moving from pages people browse to services that agents act on, and Chrome sits at the center of that change. I would like to help partners and developers make that shift. I am a software engineer at Innovative Scientific Solutions, where I build web applications for defense customers, and I hold an M.S. in Computer Science from the Colorado School of Mines.

I have built for the web since 2021, starting as the webmaster for Mines' computer science outreach site in HTML, CSS, and JavaScript. Today I develop Angular and TypeScript interfaces, contribute heavily to UI/UX design, and build the Python and Rust services behind them. I also spearheaded our internal performance-benchmarking tool, a Python command-line application with a GUI front end that runs any combination of our 13 effect calculations and charts the results. It exposed a tenfold slowdown in how we call an external library, and its graphs made the problem easy to present to leadership. That project taught me how much faster a team moves when the data is in front of it, which is the kind of feedback loop this role builds between partners, users, and Chrome's product teams.

AI-assisted development is part of how I work. I use Claude Code and Cursor regularly, and because my current work is export-controlled, I have had to think carefully about where these tools fit: I use them only for non-controlled exploration and research, never with controlled code or data. Evaluating AI-assisted onboarding and troubleshooting workflows calls for the same judgment about where automation helps and where it needs guardrails.

The role also asks for teaching. I co-taught Data Structures and Algorithms to 120 students, taught another section of 90, designed STEM summer camps, and co-presented a teacher workshop, so turning technical knowledge into playbooks and guidance that others can act on is work I enjoy. I would welcome the chance to bring that to the Chrome Scaled Solutions team. I live in Lakewood and would be glad to work from Google's Boulder office or remotely. Thank you for your time and consideration.

Sincerely,

Colter Snyder
